

BlockFall

Tetris where every high score mints a dynamic, on-chain proof-of-skill NFT

The Problem & Our Solution

Tetris scores disappear after each game, leaving no lasting proof of skill or way to show off achievements.

- Classic Tetris scores vanish the moment you close the game
- No way to verify or showcase skill achievements over time
- BlockFall mints milestone scores as dynamic on-chain NFTs
- NFT art evolves visually based on your achievement tier
- Builds a permanent, verifiable Tetris skill collection on Solana

How It Works

Play Tetris, hit milestones, and watch your skill become a collectible NFT, all secured on Solana.

- Connect Phantom wallet, then play classic Tetris in the browser
- Hitting score or combo milestones auto-mints a compressed NFT
- Metaplex Bubblegum keeps minting costs near-zero per session
- NFT artwork updates on-chain to reflect your achievement tier
- On-chain leaderboard ranks top NFT holders and their scores

Built with

Solana, Next.js, Phaser.js or custom canvas engine, Solana Web3.js, Metaplex Bubblegum (compressed NFTs), Anchor, Phantom Wallet Adapter

Why Now & What's Next

Compressed NFTs make frequent, casual-game minting finally affordable, opening the door for always-on achievement systems.

- Solana compressed NFTs make near-free, high-frequency minting viable
- Casual gameplay moments can now be permanently recorded on-chain
- Next: seasonal leaderboards with ranked NFT badges
- Next: social sharing and NFT marketplace integration
- Next: multiplayer battle mode with wagered NFT stakes
